BASIC-ABSTRACT:

The organic solvent is pref. an alcohol, amine, ether, ester, ketone, and/or an aromatic cpd. Pref. the electrolytic etching soln. consists of 34 vol. % of con. sulphuric acid, 33 vol. % of conc. phosphoric acid and 33 vol. % of glycerin. A ferrite substrate is electrolytically etched in the electrolytic etching soln. using a photoresist pattern as a mask. The soln. does not roughen the surface of a ferrite substrate and does not corrode a photoresist formed on the ferrite substrate. Therefore an etched surface of the ferrite substrate is smooth and a sharp etching pattern is obtd.
